# Powered SSL Service

Issue 128 bit Private Label SSL Certificates

Powered SSL allows you to provide privately labelled 128 bit industry standard SSL Certificates to your customers. Powered SSL is a unique service available through the Comodo Certification Authority Infrastructure that provides you with the ability to promote your own SSL security solutions to customers.

Comodo operate the backend Certification Authority responsible for the actual processing, validation and issuance of the SSL Certificate. The front end as seen by your customers is privately labelled to ensure your branding is prominent – we power your security solutions!

Your brand is displayed:
- During the application and issuance process
- As the product type within the SSL Certificate

OU = QualitySSL $10,000 Warranty
OU = Provided by BitEngines

Enterprise customer opportunity

Powered SSL also allows you to provide Enterprise Consoles (EPKI Manager) to organisations with multiple Certificate requirements. The EPKI Manager allows organisations to manage and administer their Certificate requirements through a web-based console and avoids the inefficiency and expense usually associated with managing multiple certificates.

Comodo powers your security solutions. We provide the utility for you to provide your branded SSL Certificates to your customers

The Comodo Value Promise:
To provide our customers with products and services that are unmatched in technology and fully leverage your brand to the highest value. We ensure that $ for $ our customers will make more money from providing services powered by Comodo

Benefits
